

minimal windows® **TT**

Turn / tilt windows perfectly integrated in the most slender of profile facing widths

minimal windows® **TT** achieves maximum transparency with storey-high turn/tilt opening leaves with the narrowest of profile facing widths. This special function in the almost frameless design extends the existing, expansive opening variants by a further flexible leaf positioning and sets new standards in architectural design.

minimal windows® TT

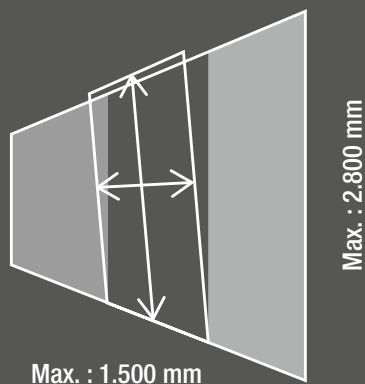

minimal windows® TT provides for the delicate integration of the turn/tilt opening elements in the minimal windows® design glass façade. The flush transition of leaf and outer frame also allows a high level of design on the inside through the fusion

of aesthetics and technology. The balustrade glazing (option) fully integrated in the profile provides additional protection against falling.

TECHNICAL CHARACTERISTICS

- Max. leaf weight 160 kg
- Max. opening angle 90°
- Max. tilt opening: 175 mm (manual) 250 mm (mechatronic)
- Mechatronic comfort fittings (optional)
- Narrow facing width of just 60 mm
- Burglar resistant to RC 2 (option)
- On the basis of the Schüco FWS 60 CV façade

THE ADVANTAGES

- Flexible integration in both minimal windows® series
- Fusion of frame and leaf
- High user comfort
- Optimum thermal insulation
- Drainage integrated in the system
- Greatest possible modularity and flexibility
- Manual or mechatronic leaf operation
- Concealed leaf
- Balustrade glazing integrated in the profile (option)
